

BIKE RACKS

Guardian[®]

MODERN INNOVATIVE DESIGN BIKE
PARKING STANDS

Our inspiration was centered around the architects desire for a modern innovative and decorative looking rack that also meets the function requirements requested by the end user. The length, the bend, and the spacing of the rubber guarded locking bars were an engineering masterpiece! Why? Most bike racks don't limit the user on where or how you lock your bike or scooter to the rack. The intuitive Locking Bar design doesn't allow bikes or scooters to be parked perpendicular to the rack. With ADA requirements and liability concerns, controlling how a user parks their bike or scooter makes this rack a safe addition for cities, developers, architects and especially the user.

Product Features

- Modern Innovative Design Guardian 2-bike parking stand
- Scratch-free molded guards protect bicycles from metal-to-metal damage
- Overlapping locking bar prevents locking bikes on the ends of the rack.. This controls the footprint and helps prevent ADA issues
- E-Scooter compatible
- Diamond tube "A"-frame made from ASTM A500 pipe
- Unlike A style racks, The Guardian locking bar creates distance between bikes to help alleviate bike to bike contact
- Rail compatible to allow for units
